acknowledged as one of the greatest achievements of modern scholarship arnold toynbee s a study of history is a ten volume analysis of the rise and fall of human civilizations contained in two volumes d c somervell s abridgement of this magnificent enterprise preserves the method atmosphere texture and in many instances the very words of the original first published in 1947 and 1957 these two volumes are themselves a great historical achievement volume 2 which abridges volumes vii x of toynbee s study includes sections on universal states universal churches heroic ages contacts between civilizations in space contacts between civilizations in time law and freedom in history the prospects of the western civilization and the conclusion of somervell s work toynbee wrote the reader now has at his command a uniform abridgement of the whole book made by a clear mind that has not only mastered the contents but has entered into the writer s outlook and purpose

most of the prefatory issues are extensively elaborated upon in the prolegomenon

which also contains the complete references to the texts and authors discussed below nevertheless the preface would be grossly incomplete without touching on some of these issues books and scholars too many of this book s chapters e g moras marx s d b weiner s examine and reference important earlier as well as contemporary general histories of psychiatry and specialized monographs in german french italian and spanish also in his 1968 short history of psychiatry discussed below ackerknecht pp xi xii references important nineteenth and earlier twentieth century psychiatric histories in english french and german such citations will of course not be repeated here finally thanks to several publishers re editions of dozens of classical psychiatric texts one can consult their bibliographies as well see prolegomenon for references to these splendid series in a rough and ready sense medical history began in classical greece for example on ancient medicine while traditionally included in the hippocratic corpus this text seems more likely to have been written by a non or even anti hippocratic doctor moreover the hippocratic and other schools were hardly as secular as we now suppose on epilepsy for example does not so much declare the prevalent denotation of it as the sacred disease erroneous as it does that it is no more nor less sacred than any other disease

from a leading british historian the story of how fear of war shaped modern england by the end of world war i britain had become a laboratory for modernity intellectuals politicians scientists and artists among them arnold toynbee aldous huxley and h g wells sought a vision for a rapidly changing world coloring their innovative ideas and concepts from eugenics to freud s unconscious was a creeping fear that the west was staring down the end of civilization in their home country of britain many of these fears were unfounded the country had not suffered from economic collapse occupation civil war or any of the ideological conflicts of inter war europe nevertheless the modern era s promise of progress was overshadowed by a looming sense of decay and death that would deeply influence creative production and public argument between the wars in the twilight years award winning historian richard overy examines the paradox of this period and argues that the coming of world war ii was almost welcomed by britain s leading thinkers who saw it as an extraordinary test for the survival of civilization and a way of resolving their contradictory fears and hopes about the future

drug disasters from thalidomide to opren and other less dramatic cases of drug injury raise questions about whether the testing and control of medicines provides satisfactory protection for the public in this revealing study john abraham develops a theoretically challenging realist approach in order to probe deeply into the work of scientists in the pharmaceutical industry and governmental drug regulatory authorities on both sides of the atlantic through the examination of contemporary controversial case studies he exposes how the commercial interest of drug manufacturers are consistently given the benefit of the scientific doubts about

medicine safety and effectiveness over and above the best interests of patients a highly original combination of philosophical rigour historical sensitivity and empirical depth enables the black box of industrial and government science to be opened up to critical scrutiny much more than in previous social scientific study all major aspects of drug testing and regulation are considered including pre clinical animal tests clinical trials and postmarketing surveillance of adverse drug reactions the author argues that drug regulators are too dependent on pharmaceutical industry resources and expertise and too divorced from public accountability the problem of corporate bias is particularly severe in the uk where regulatory decisions about medicine safety are shrouded in greater secrecy than in the us since the purpose of drug regulation should be to maximize the safety and effectiveness of medicines for patients the public needs and deserves policies to counteract corporate bias in drug testing and evaluation john abraham s realist analysis provides a robust basis for policy interventions at the institutional and legislative levels he proposes that corporate bias could be reduced by more extensive freedom of information greater autonomy of government scientists from pharmaceutical industry the development of independent drug testing by the regulatory authority increased patient representation on regulatory committees and more frequent and thorough oversight of regulatory performance by the legislature this book should be of interest to anyone who cares about how medicines should be controlled in modern society it should prove particularly rewarding for students and researchers in the sociology of science and technology science and medicines policy medical sociologists the medical and pharmaceutical professions and consumer organizations
