--- Sample Question Analysis

Question: A patient is prescribed a beta-blocker for hypertension. Which of the following side effects is most likely associated with this medication? A) Tachycardia B) Bronchospasm C) Hyperglycemia D) Diarrhea

Correct Answer: B) Bronchospasm

Explanation: Beta-blockers, especially non-selective ones, can block beta-2 receptors in the lungs, leading to bronchospasm. This is particularly important in patients with asthma or COPD. Tachycardia (A) is unlikely as beta-blockers reduce heart rate. Hyperglycemia (C) is less common; some beta-blockers may cause hypoglycemia or mask hypoglycemia symptoms. Diarrhea (D) is not a typical side effect of beta-blockers. This example illustrates the importance of understanding drug mechanisms and side effect profiles, a core focus of Lippincott questions.
